São Paulo, Brazil

PROFESSIONAL SUMMARY

Senior Software Engineer with 8+ years building resilient full-stack applications and leading infrastructure transformation across fintech, telecom, and logistics. Deep expertise in backend architecture, API design, and cloud-native systems combined with DevOps and SRE practices: migrated 200+ on-premise applications to AWS, architected infrastructure-as-code pipelines reducing provisioning from weeks to days, and managed large-scale incidents with sub-hour MTTR. Currently at Goldman Sachs designing and shipping AI-powered internal tools that automate workflows and accelerate engineering productivity for FICC trading platforms while driving reliability improvements and operational automation across production systems.

TECHNICAL SKILLS

Python · JavaScript · TypeScript · Java · C# · PHP · Node.js · React · Django · Flask · Spring Boot · AWS · Azure · Docker · Terraform · CI/CD · Linux · PostgreSQL · MongoDB · MySQL · Redis · REST APIs · GraphQL · WebSockets

PROFESSIONAL EXPERIENCE

Site Reliability Engineer (SRE)

Goldman Sachs · Oct 2024 – Present · São Paulo, Brazil

- Designed and built an AI-assisted RAG documentation tool using Python (Quart) orchestrator for AI logic and internally-hosted LLM backend — enabling support engineers and business users to query internal documentation conversationally.
- Enhanced and fully integrated an existing LLM-based interview platform, repackaging it as a Java web application to streamline firm-wide distribution via executables with standard Helpdesk installation support.
- Deployed a web-based business reporting solution to replace email distribution, improving accessibility, auditability, and operational efficiency for stakeholders.
- Delivered training sessions on GitHub Copilot and AI-assisted workflows for production support engineers across multiple FICC clusters, accelerating adoption of developer productivity tooling.
- Executed migration of internal Apache infrastructure from RHEL 7 to RHEL 8 within cluster; authored migration documentation subsequently adopted by other clusters.
- Led incident response for production issues impacting live trades — debugged FIX messages, coordinated with trading desks and engineering teams to resolve outages fast, wrote post-mortems, and followed through on fixes to prevent recurrence.

Systems Analyst

Alctel Telecom · May 2023 – Mar 2024 · Belo Horizonte, Brazil (remote)

- Integrated chatbot solutions with WhatsApp using C#, WebSockets, and managed MySQL databases, including writing stored procedures and optimizing queries for production workloads.
- Provided hands-on technical support for client systems, troubleshooting production issues across Windows Server environments and ensuring high client satisfaction.
- Managed Windows Server infrastructure, performed database administration tasks, and ran operational procedures to maintain system health and availability. Conducted client meetings for project planning, requirements gathering, and solution design.

C# # WebSockets # MySQL # Windows Server

Systems Analyst

GFT Group · Jan 2022 – Mar 2023 · São Paulo, Brazil (remote)

- Led the migration of 200 on-premise applications to AWS, architecting cloud-native solutions that resulted in more efficient processes and significant productivity gains.
- Implemented infrastructure and documentation automation using Terraform and CI/CD pipelines, reducing provisioning time from weeks to days. Collaborated with cross-functional teams to establish best practices for cloud security, cost optimization, and operational excellence.

Web Developer

Suma – Consulting Group · Nov 2019 – Jan 2022 · Campinas, São Paulo

- Developed a Django server to collect data from telemetry modules embedded in freight trucks, handling full backend architecture and API design.
- Managed Linux server infrastructure to deploy and maintain the application in production, including configuration, monitoring, and troubleshooting. Integrated a Data Warehouse with Azure Cloud infrastructure for data processing, analysis, and reporting.
- Collaborated on the development of an Android application for data transmission and real-time tracking.

Django # React.js # Node.js # Linux # Azure # Data Warehouse

Junior Software Developer

Bit Capital · Jul 2019 – Oct 2019 · Campinas, Brazil

- Developed an API layer in TypeScript and Node.js to streamline transactions on a blockchain-based digital banking platform, integrating with multiple payment providers and cryptocurrency exchanges.

TypeScript # Node.js # Blockchain # Payment Integration

Junior Software Developer

Boilesen Associates · Mar 2019 – Jul 2019 · Campinas, Brazil

- Built a digital marketing tool for lead generation and tracking using PHP and the Slim framework, integrating with CRM systems and analytics dashboards to measure campaign performance.

PHP # Slim Framework # CRM Integration

Java Web Developer Intern

Stoom · Jan 2018 – Oct 2018 · Campinas, Brazil

- Developed the Suprevida e-commerce website using Apache Struts 2, Java, and JSP, managing client demands and delivering features in an agile team environment.

PERSONAL PROJECTS

Yvy

Jul 2025 – Present

Environmental observability platform that tracks and overlays deforestation and wildfire data with firms, conservation units (UCs), and indigenous territories. Integrates official data from ICMBio and FUNAI to provide actionable insights for environmental monitoring and compliance in Brazil.

JS Agent

Mar 2026 – Present

Browser-first multi-step agent with hosted/local LLM routing, modular skill runtime, modular prompt composition, context-aware orchestration, and durable memory/cache layers in local storage.

EDUCATION

B.Tech in Information Security Estácio

Feb 2023 – Nov 2025

Computer Engineering UNICAMP

2014 – Feb 2019

CERTIFICATIONS & HIGHLIGHTS

- **Foundations of Cybersecurity** — Google
- **Cambridge B2 First** — Score 169 (Full Professional English)
- **OBI – Silver Medal** (Brazilian Olympiad in Informatics)
- **UNICAMP Phoenix Robotics Team** (2014–2016): Developed autonomous robot with visual cone recognition using OpenCV and Python
